'dike geology

**May 29th, 2020 - a dike or dyke in geological
usage is a sheet of rock that is formed in a
fracture of a pre existing rock body dikes can
be either magmatic or sedimentary in origin
magmatic dikes form when magma flows into
a crack then solidifies as a sheet intrusion
either cutting across layers of rock or
through a contiguous mass of rock clastic
dikes are formed when sediment fills a pre
existing crack"****buch physical geology of
